

Information about misclassified cell lines is currently accumulating. However, the problem seems to seep very slowly through the scientific community (p. 20)

*Agrobacterium* transforms plants. But how exactly does the transforming T-DNA get into the plant's nucleus? Heribert Hirt and his team now know. (p. 36)

It's not just about elks and IKEA. Sweden's emerging biotech has pushed the Scandinavian nation into Europe's top five countries for life science. (p. 38)

The numbers of the UK biobank project are impressive: 20,000 tubes will be collected from 600 participants each day. That sums up to 15 million samples over the next five years. (p. 46)
